- ★ Loading and Unloading in "Z" and "C" Patterns
- ★ Can be Designed to Integrate with Other Conveyors
- ★ Quiet Operation at Less than 70 Decibels.

The Autostore is an all mechanical indexing and accumulating lift. Its modular design is capable of handling the high cycle rates associated with daily usage. The heavy duty drive mechanism makes this lift well suited for vertical storage/buffering applications. A complete control panel for all automatic and manual functions is included as standard. Because the products conveyed never change orientation, the Autostore is an excellent option for handling products which are likely to slide or tumble on an incline or spiral conveyor.

At right is an infeed view of the VSI Autostore that shows how the packages are stored and transported from one level to the next.

— Standard Specifications —

- Machine Tapered Sprockets
- T-Handle Access Doors
- Pneumatic or mechanical Sweeps
- Energy Management
- Expanded Metal and Lexan Guarding
- One Day of Startup Assistance

Optional Equipment
